OLAYIWOLA AGBAJE

FRONTEND ENGINEER | REACT · TYPESCRIPT · FINTECH PRODUCT ENGINEERING
Lagos, Nigeria | agbajeolaiwola@gmail.com | agbaje-olayiwola.xyz

PROFILE

Frontend engineer with 6+ years building performant, accessible, production-grade financial and SaaS interfaces with React, TypeScript, and Next.js. Delivered banking experiences across 30+ African markets, optimized key journeys to under two seconds of interactive load, and built a payments-enabled SaaS product from first commit to paying customers. Strong ownership across product design handoff, reusable UI architecture, secure transaction flows, testing, and cross-functional delivery.

EXPERIENCE

Access Group | Frontend Engineer

Jul 2024 – Present · React, TypeScript, Next.js, Redux Toolkit Query, Tailwind CSS, Ant Design

- Own implementation and maintenance of internal and customer-facing fintech interfaces, partnering with product, design, backend and QA teams in two-week Agile cycles.
- Improved initial loading on primary customer journeys through route-level code splitting, lazy loading and bundle analysis; maintained interactive load below two seconds on key surfaces.
- Designed and built enterprise supervisor-review experiences, turning product requirements into responsive, functional React components with in-app PDF preview and download.
- Implemented robust authentication and transaction experiences, including token refresh, role-based UI access, optimistic updates and complete loading/error states.

Adtivity | Frontend Engineer, Founding Team

2020 – Present · React, TypeScript, Next.js, Redux Toolkit, RTK Query, Recharts, Jest, Playwright

- Built an analytics and payments SaaS product from initial codebase to paying customers, owning frontend architecture and end-to-end feature delivery.
- Created a reusable library of 40+ typed, documented UI components, supporting consistent product experiences and faster feature development.
- Delivered interactive, real-time analytics dashboards and integrated Paystack checkout, subscription gating and asynchronous payment-status reconciliation.
- Introduced Jest/React Testing Library component and integration coverage plus Playwright tests for signup, payment and dashboard journeys, enforced in GitHub Actions CI.

Hoppaz | Full-Stack Engineer

2026 – Present · Next.js, TypeScript, Supabase/Postgres, LiveKit, Vercel

- Own production for hoppaz.fun, a Lagos events and community app with 1,000+ users, including the Supabase/Postgres database and Vercel deployments.
- Improved the guest-to-account path: wrote SQL to separate anonymous guest sessions from real accounts, added a "save your progress" prompt for guests who had earned XP (keeping their identity), and cut sign-up to email and password plus Google sign-in.
- Built Speed Meet, a real-time feature that pairs users by shared interests for 4-minute one-to-one voice chats, using LiveKit audio, Postgres security-definer RPCs for the match queue, mutual opt-in and block/report, and a server-side token route that limits each audio room to its two matched participants.
- Built the full Speed Meet UI (interest picker, waiting screen, live call with countdown, keep-in-touch decision) and a "Tonight" discovery screen that ranks upcoming events by each user's interests.
- Wrote an idempotent event-import pipeline with a dry-run mode: venue pinning, multi-day expansion, flyer compression and upload, duplicate matching, and "lead" flags for unconfirmed times or prices; loaded 62 events (57 new, 5 updated) into production in one run.

Ecobank (via Codemanina) | Frontend Developer

Jul 2023 – Feb 2024 · React, TypeScript, Next.js, React Hook Form, SCSS

- Shipped onboarding, account and payment experiences for the MySME business-banking platform serving 5,000+ users across 30+ African markets.
- Implemented accessible, WCAG-aligned interfaces with keyboard support, semantic HTML and clear form validation; collaborated with design, product and backend teams through market-release QA.
- Validated user journeys across Chrome, Safari, Firefox and Edge to improve consistency and usability.

Simfy Crypto Exchange | Frontend Developer

May 2024 – Dec 2024 · React, TypeScript, Redux, WebSockets

- Built real-time trading and wallet interfaces with streaming price/order-book data, transaction confirmations, address/amount validation and precision-aware withdrawal experiences.

GeekRadius | Frontend Developer

Nov 2018 – Apr 2020 · React, JavaScript, HTML, CSS

- Delivered four client web applications from design handoff through deployment, with reported 99.99% uptime.

SELECTED PRODUCTS

Ecobank MySMEApp — Multi-market business banking: mysme.ecobank.com | Adtivity — Analytics and payments SaaS: adtivity.xyz | Hoppaz — Lagos events and community app: hoppaz.fun

TECHNICAL SKILLS

Frontend: TypeScript, JavaScript (ES6+), React, Next.js, HTML5, CSS3, SCSS, Tailwind CSS, Ant Design, accessible UI, responsive design

Architecture & APIs: Reusable component systems, Redux Toolkit, RTK Query, React Query, REST, WebSockets, Supabase/Postgres, LiveKit (WebRTC), authentication flows, performance optimization

Quality & Delivery: Jest, React Testing Library, Playwright, Cypress, GitHub Actions, Git, code review, Agile, Figma handoff

EDUCATION

B.Sc., University of Lagos (2016–2021) | Front End Development Libraries — freeCodeCamp
